Data in the genomics field is booming. In just a few years, organizations such as the National Institutes of Health (NIH) will host 50+ petabytes—or over 50 million gigabytes—of genomic data, and they're turning to cloud infrastructure to make that data available to the research community. How do you adapt analysis tools and protocols to access and analyze that volume of data in the cloud? With this practical book, researchers will learn how to work with genomics algorithms using open source tools including the Genome Analysis Toolkit (GATK), Docker, WDL, and Terra. Geraldine Van der Auwera, longtime custodian of the GATK user community, and Brian O'Connor of the UC Santa Cruz Genomics Institute, guide you through the process. You'll learn by working with real data and genomics algorithms from the field. This book covers: Essential genomics and computing technology background Basic cloud computing operations Getting started with GATK, plus three major GATK Best Practices pipelines

Automating analysis with scripted workflows using WDL and Cromwell Scaling up workflow execution in the cloud, including parallelization and cost optimization Interactive analysis in the cloud using Jupyter notebooks Secure collaboration and computational reproducibility using Terra

The flying public, airlines, and governments will all agree on one date that changed commercial flying: that was September 11, 2001. The first edition of *Aviation Law: Cases, Laws and Related Sources*, described early consequences of that event, particularly compensation of victims and early tightening of aviation security. Subsequently laws and regulations affecting all aspects of aviation changed so rapidly that it became difficult to set a cut-off date for the second edition. The rapid flow of events made an update urgent. Several gaps in the materials of the first edition became evident as the book was used. The authors filled those gaps, pruned old materials and added much new material describing not only the later developments, but also evolving economics and flight technology. The objective of the case book is to offer a basic handbook for air law practitioners providing them with a starting point for almost any subject they may encounter. The stories in this book are about the experiences of the poor, migrant farmworker. They depict the cruelty of the life, but also the ability of a community to come together to help one another survive. Comprehensive guide to identifying and acquiring government-sponsored documents, maps, patents, specifications, and other resources. Describes each item and gives its source, acronym, series designation or short title, cost, where it is indexed, and telephone numbers to call for more information. It emphasizes research development, testing, and evaluation programs. This report describes how the application of the principles of radiation protection recommended by the International Commission on Radiological Protection may be extended to unexpected or accidental situations by changing from the dose based system of radiation protection to a unified approach within a probabilistic framework. "This volume is the result of an AGU Chapman conference held September 14-18, 1992, in Williamsburg, Virginia"--Pref. This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient. Monthly. References about events and developments in the sociology and economics of medicine. Sources include scientific and medical journals as well as newspapers and popular magazines. Entries arranged under subjects in alphabetical order. Author index. Guideline 12: If the Results of Previous Studies Are Inconsistent or Widely Varying, Cite Them Separately This Second Edition of Diana Ridley's bestselling guide to the literature review outlines practical strategies for reading and note taking, and guides the reader on how to conduct a systematic search of the available literature, and uses cases and examples throughout to demonstrate best practice in writing and presenting the review. New to this edition are examples drawn from a wide range of disciplines, a new chapter on conducting a systematic review, increased coverage of issues of evaluating quality and conducting reviews using online sources and online literature and enhanced guidance in dealing with copyright and permissions issues. The impact of light on works of art and archival materials

has long been an issue of concern to conservators and other museum professionals, yet the literature on this subject has never been systematically reviewed. This volume fills that gap by providing a survey of the impact of exposure to light with an emphasis on photoflash and reprographic sources. The information provided will assist the professional audience, especially conservators and collections managers, in assessing the risk to art and archival objects of such exposures. The text surveys relevant photophysical and photochemical principles, photometric and radiometric measurement, and the spectral outputs of several light sources. Materials discussed include colorants and natural fibers; pulp, paper, and wood; natural and synthetic polymers; fluorescent whitening agents; photographic and reprographic materials; and objects containing combinations of materials. Approximations and assumptions used in the evaluation process are discussed in some detail, with examples of the different types of calculations. The Research in Conservation reference series presents the findings of research conducted by the Getty Conservation Institute and its individual and institutional research partners, as well as state-of-the-art reviews of conservation literature. Each volume covers a topic of current interest to conservators and conservation scientists. This is a reproduction of a book published before 1923.
