*Sustainability Metrics and Indicators of Environmental Impact Apr 04 2021 Sustainability Metrics and Indicators of Environmental Impact: Industrial and Agricultural Life Cycle Assessment covers trending topics on the environmental impact of systems of production, putting emphasis on lifecycle assessment (LCA). This methodology is one of the most important tools of analysis, as mathematical models are applied that will quantify the systematic inputs and outputs of the processes in order to evaluate the sustainability of industrial processes and products. In this sense, LCA is mainly a tool to support environmental decision-making that analyzes the environmental impacts of products and technologies from a lifecycle perspective. The emergence of ever-larger global issues, such as the energy dilemma, the changing climate and the scarcity of natural resources, such as water, has boosted the search for tools capable of ensuring the reliability of the results published by the industries, and has become an important tool in order to achieve sustainability and environmental preservation. Thus, lifecycle assessment (LCA), including carbon footprint valuation is necessary to ensure better internal management. *Geography Education Promoting Sustainability Apr 23 2020*  
*Through out the current period of educational change, Geography education has also changed. The innovations may be the starting point to affect conceptual change and paradigm shifts. Geography education assimilates and integrates knowledge, skills and scientific methodologies. The ten articles in this book illuminate a wide range of topics of interest to Geography education. In their article, Skarstein and Wolf discuss how the interplay between the environment, society and economy pillars of sustainability thinking play out on scales of time, space and multitude and how geography teachers can support the students' understanding of sustainability. Yli-Panula et al. analysed used teaching and learning methods to find out good ones for promoting sustainability in geography. The same idea can be found in Duffin's and Perry's article on Place-Based Ecology Education. In their article, Dür and Keller discuss the topics of quality of life, sustainability and global justice based on the goals of Education for Sustainable Development. Evaluation is an important part of learning. It is reviewed by Schauss and Sprenger regarding climate change education. The following two articles deal with students' views of landscapes worth conserving. In both studies, students expressed concern about the state of the environment. Yli-Panula et al. found that the Mexican students seldom considered their own activities in relation to the environment while Yli-Panula et al. stated that only some of the Finnish and Swedish students act as observers while others actively care for their environment.*

*The remaining three articles deal with teaching methods and models. Benninghaus et al. present a benchmark method, which allows statements about the quality of the maps/diagrams in general. Álvarez-Otero and De Lázaro y Torres, on the other hand, describe their Technological Pedagogical Content Knowledge model. Kopnina and Saari discusses student assignments reflecting on the documentary film through critical pedagogy and ecopedagogy.*

The book discusses issues related to environmental sustainability; how, at the local level, leisure is considered as a solution to a range of social, environmental, and economic issues; and the value of leisure as an asset for addressing several social sustainability challenges. This book was originally published as a special issue of *Leisure/Loisir: Journal of the Canadian Association for Leisure Studies*.*

*Sustainability Impact Assessment of Land Use Changes Mar 03 2021 There are many reasons why strategic intelligence is required to support policy decisions. These primarily stem from the nature of today's knowledge society with two contrasting trends. On the one hand, there is a trend of increasing human intelligence in the economic, social and political systems. On the other hand, there is a trend towards dissolving certainties about the problems and solutions of today's society. Clearly, more information does not necessarily imply more certainties on how to act. What is more, the same facts are often interpreted in markedly different ways: the same policy relevant information can – and often does – result in conflicting framing of a problem by different stakeholders. This is mainly due to competing assumptions, rather than because of inconsistent facts. Therefore, it is not surprising that policy-makers are calling for strategic intelligence to support their understanding of today's challenges, including the relevant aspects of science and technology, their impact and their possible future developments. Over the last 15 years, Europe has rapidly adopted the practice*

*of developing and using Impact Assessment (IA) tools to support decision-making. Formal procedures and guidance for IA are well established within the European Commission and in most EU Member States. *Sustainability Considerations for Procurement Tools and Capabilities Oct 22 2022 Federal laws, regulations, and executive orders have imposed requirements for federal agencies to move toward the sustainable acquisition of goods and services, including the incorporation of sustainable purchasing into federal agency decision making. Since the federal government is such a significant player in the market, its move to incorporate sustainable procurement practices could have a profound impact on the types of products being developed for the market as a whole. The General Services Administration (GSA) has played a key role in furthering sustainable procurement practices throughout the federal government. GSA is responsible for formulating and maintaining government-wide policies covering a variety of administrative actions, including those related to procurement and management. GSA has several ongoing activities related to sustainable procurement to assess the feasibility of working with the federal supplier community - vendors and contractors that serve federal agencies to measure and reduce greenhouse gas emissions in the supply chain while encouraging sustainable operations among suppliers. GSA has also been actively developing programs to assist federal agencies in making sustainable procurement decisions. As federal*

*agencies cannot directly fund the development of sustainable procurement tools, they are particularly interested in understanding how to foster innovation and provide incentives for collaboration between developers and users of tools for sustainable purchasing throughout the supply chain. The training of procurement professionals is also a priority for these agencies. To assist efforts to build sustainability considerations into the procurement process, the National Research Council appointed a committee to organize a two-day workshop that explored ways to better incorporate sustainability considerations into procurement tools and capabilities across the public and private sectors. The workshop was designed to help participants assess the current landscape of green purchasing tools, identify emerging needs for enhanced or new tools and opportunities to develop them, identify potential barriers to progress, and explore potential solutions. The workshop provided an opportunity for participants to discuss challenges related to sustainable purchasing and to developing new procurement tools. Sustainability Considerations for Procurement Tools and Capabilities reviews the presenters' recommendations and tools currently used in sustainable procurement, such as databases for ecolabels and standards, codes, or regulations and other nontechnological tools such as policies, frameworks, rating systems, and product indexes.*

*Sustainability and the U.S. EPA* *May 17 2022 Sustainability is based on a simple and long-recognized factual premise: Everything that humans require for their survival and well-being depends, directly or indirectly, on the natural environment. The environment provides the air we breathe, the water we drink, and the food we eat. Recognizing the importance of sustainability to its work, the U.S. Environmental Protection Agency (EPA) has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision-making at the agency. To further strengthen the scientific basis for sustainability as it applies to*

*human health and environmental protection, the EPA asked the National Research Council (NRC) to provide a framework for incorporating sustainability into the EPA's principles and decision-making. This framework, Sustainability and the U.S. EPA, provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s. Although risk-based methods have led to many successes and remain important tools, the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk, such as depletion of natural resources, climate change, and loss of biodiversity. Moreover, sophisticated tools are increasingly available to address cross-cutting, complex, and challenging issues that go beyond risk management. The report recommends that EPA formally adopt as its sustainability paradigm the widely used "three pillars" approach, which means considering the environmental, social, and economic impacts of an action or decision. Health should be expressly included in the "social" pillar. EPA should also articulate its vision for sustainability and develop a set of sustainability principles that would underlie all agency policies and programs.*

*Tools and Weapons Dec 12 2021 The instant New York Times bestseller. From Microsoft's president and one of the tech industry's broadest thinkers, a frank and thoughtful reckoning with how to balance enormous promise and existential risk as the digitization of everything accelerates. "A colorful and insightful insiders' view of how technology is both empowering and threatening us. From privacy to cyberattacks, this timely book is a useful guide for how to navigate the digital future." — Walter Isaacson Microsoft President Brad Smith operates by a simple core belief: When your technology changes the world, you bear a responsibility to help address the world you have helped create. This might seem uncontroversial, but it flies in the face of a tech sector long obsessed with rapid growth and sometimes on disruption as an end in itself. While sweeping digital transformation holds great promise, we have reached an inflection point. The world has turned information technology into both a powerful tool and a formidable weapon, and new approaches are needed to manage an era defined by even more powerful inventions like artificial intelligence. Companies that create technology must accept greater responsibility for the future, and governments will need to regulate technology by moving faster and catching up with the pace of innovation. In Tools and Weapons, Brad Smith and Carol Ann Browne bring us a captivating narrative from the cockpit of one of the world's largest and most powerful tech companies as it finds itself in the middle of some of the thorniest emerging issues of our time.*

While in no way a self-glorifying "Microsoft memoir," the book pulls back the curtain remarkably wide onto some of the company's most crucial recent decision points as it strives to protect the hopes technology offers against the very real threats it also presents. There are huge ramifications for communities and countries, and Brad Smith provides a thoughtful and urgent contribution to that effort.*
