"The author retraces Frederick Law Olmsted's journey across the American South in the 1850s, on the eve of the Civil War. Olmsted roamed eleven states and six thousand miles, and the New York Times published his dispatches about slavery and its defenders. More than 150 years later, Tony Horwitz followed Olmsted's route, and whenever possible his mode of transport--rail, riverboats, in the saddle--through Appalachia, down the Ohio and Mississippi, through Kentucky, Tennessee, Louisiana, and across Texas to the Rio Grande, discovering and reporting on vestiges of what Olmsted called the Cotton Kingdom"--

Participatory techniques have established themselves in both project implementation in developing countries and community interventions in industrial countries. Recently, participation has been fashionably dismissed as more rhetoric than substance, and subject to manipulation by agents pursuing their own agendas under cover of community consent. In this important new volume, development and other social policy scholars and practitioners seek to rebut this simplistic conclusion. They show how participation can help produce genuine transformation for marginalized communities. This volume is the first comprehensive attempt to evaluate the state of participatory approaches in the aftermath of the "Tyranny" critique. It captures the recent convergence between participatory development and participatory governance. It revisits the question of popular agency, as well as spanning the range of institutional actors involved--the state, civil society and donor agencies. The volume embeds

participation within contemporary advances in development theory. Gene Wolfe's **BOOK OF THE NEW SUN** has been hailed by both critics and readers as quite possibly the best science fiction novel ever written. And yet at the same time, like another masterpiece of fiction, James Joyce's *Ulysses*, it's been deemed endlessly complex and filled with impenetrable mysteries. Now, however, in the first book-length investigation of Wolfe's literary puzzlebox, Robert Borski takes you inside the twisting corridors of the tetralogy and along the way reveals his solutions to many of the novel's conundrums and riddles, such as who really is Severian's lost twin sister (almost certainly not who you think) and why he believes the novel's main character may not even be the torturer Severian. Furthermore, and in essay after essay, Borski demonstrates how a single master key will unlock many of the book's secret relationships—all in the attempt to guide you through the labyrinth that is Gene Wolfe's **BOOK OF THE NEW SUN**. This exciting nonfiction book brings the exploration and discovery of the New World to life through lively images, engaging facts, and supportive text. Readers will take a trip through history and the Age of Discovery as they learn about such explorers as Marco Polo, Christopher Columbus, Ferdinand Magellan, and Henry Hudson. Readers will love the brilliant images of maps and documents that show the American Discovery, the Northwest Passage, and other explorations. The table of contents and glossary work to aid in readers' understanding of the content. This 6-Pack includes six copies of this title

plus a lesson plan. Valuable tools for study or scholarship. Taking a telescopic view of the Bible, Exploring the Old Testament Book by Book and Exploring the New Testament Book by Book enable readers to see the big picture behind this Book of books, to see how the various parts of Scripture relate to one another. These volumes from gifted expositor John Phillips teaches the importance of taking a few steps back from Scripture in order to gain fresh insight into the message, meaning, and art of the Bible. Written by scholars with extensive experience teaching in colleges and universities, the Exploring the Bible series has for decades equipped students to study Scripture for themselves. Filled with classroom-friendly features, this first volume, now in its third edition, provides an accessible introduction for anyone studying Jesus, the Gospels, and Acts. "This book explores the people, places, and history of the New Jersey Colony"-- While it is the smallest region within the United States, New England played a major role in the nation's early history. Exploring New England examines the historic importance of the region as well as its geography, biology, industries, and diverse cultures. Easy-to-read text, vivid images, and helpful back matter give readers a clear look at this subject. Features include a table of contents, infographics, a glossary, additional resources, and an index. Aligned to Common Core Standards and correlated to state standards. This book explains in laypersons' terms a new approach to studying consciousness based on a partnership between neuroscientists and complexity scientists. The author, a physicist turned neuroscientist, outlines essential features

of this partnership. The new science goes well beyond traditional cognitive science and simple neural networks, which are often the focus in artificial intelligence research. It involves many fields including neuroscience, artificial intelligence, physics, cognitive science, and psychiatry. What causes autism, schizophrenia, and Alzheimer's disease? How does our unconscious influence our actions? As the author shows, these important questions can be viewed in a new light when neuroscientists and complexity scientists work together. This cross-disciplinary approach also offers fresh insights into the major unsolved challenge of our age- the origin of self-awareness. Do minds emerge from brains? Or is something more involved? Using human social networks as a metaphor, the author explains how brain behavior can be compared with the collective behavior of large-scale global systems. Emergent global systems that interact and form relationships with lower levels of organization and the surrounding environment provide useful models for complex brain functions. By blending lucid explanations with illuminating analogies, this book offers the general reader a window into the latest exciting developments in brain research. Readers of this last volume in the series will gain fresh insight into the lives of more than forty people from the New Testament, including well-known characters such as Mary, Peter, and John, and lesser-known characters such as Anna and Nathanael. Includes outlines and numerous illustrations and quotations. How can businesses balance the demands of both exploiting and exploring? Companies and their leaders

have to use both hands: on the one hand making next quarter's targets through existing business, whilst simultaneously exploring new opportunities. This is the first book to explain how to use this approach to encourage innovation. Spirituality and psychosis both inhabit the region where ordinary reason ceases to function and barriers break down. The connection between them is evident - what is remarkable is how conventional thinking obscures the connection. This book challenges conventional understandings with a radical new perspective. The interface between psychosis and spirituality is explored, drawing on key research and latest developments from a wide spread of disciplines: Gordon Claridge on schizotypy, Peter Fenwick on the neuropsychological perspective, Neil Douglas Klotz on a new understanding of spirituality, Peter Chadwick on the mystical side of psychosis, David Kingdon on CBT for psychosis and religious delusions, are just five of the 12 distinguished contributors to this book. This new perspective will be important for those professionally interested in both psychosis and spirituality (therapists, priests, etc.) people seeking a well grounded framework for their own direct experience in this area and everyone interested in the latest thinking and research on this topic. We know that the earliest Christians sang hymns. But are some of these early Christian hymns preserved for us in the New Testament? Matthew Gordley takes a new look at didactic hymns in the Greco-Roman and Jewish world of the early church, considering how they might function in the New Testament and what they could tell us about early

Christian worship. DISCOVER THE WORLD OF LIFE AS GOD CREATED IT! The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creatio. You will learn about the following and so much more: How does biological classification give each different type of plant or animal a unique name? In what ways are seeds spread around the world? What food does the body use for long-term storage of energy? How did biologists learn how the stomach digested food? What plant gave George de Mestral the idea for Velcro? For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990s, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design or creation. The newest book in our Exploring series, Exploring the World of Biology is a fascinating look at life - from the smallest proteins and spores, to the complex life systems of humans and animals. Recent advancements in technology have led to significant improvements and developments within learning environments. When utilized properly, these innovations can serve as a valuable resource for educators and students. Exploring the New Era of Technology-Infused Education is a pivotal reference source for the latest scholarly research on the

implementation of emerging technologies in contemporary classroom settings. Highlighting theoretical foundations, empirical case studies, and curriculum development strategies, this book is ideally designed for researchers, practitioners, educators, and academics actively involved in teaching and learning environments. Learn to easily build gadgets, gizmos, robots, and more using Arduino

Written by Arduino expert Jeremy Blum, this unique book uses the popular Arduino microcontroller platform as an instrument to teach you about topics in electrical engineering, programming, and human-computer interaction. Whether you're a budding hobbyist or an engineer, you'll benefit from the perfectly paced lessons that walk you through useful, artistic, and educational exercises that gradually get more advanced. In addition to specific projects, the book shares best practices in programming and design that you can apply to your own projects. Code snippets and schematics will serve as a useful reference for future projects even after you've mastered all the topics in the book. Includes a number of projects that utilize different capabilities of the Arduino, while interfacing with external hardware

Features chapters that build upon each other, tying in concepts from previous chapters to illustrate new ones Includes aspects that are accompanied by video tutorials and other multimedia content Covers electrical engineering and programming concepts, interfacing with the world through analog and digital sensors, communicating with a computer and other devices, and internet connectivity Explains how to combine smaller topics into more complex projects Shares

downloadable materials and source code for everything covered in the book Projects compatible with many official Arduino boards including Arduino Uno; Arduino Leonardo; Arduino Mega 2560; Arduino Due; Arduino Nano; Arduino Mega ADK; LilyPad Arduino and may work with Arduino-compatible boards such as Freeduino and new third party certified boards such as the Intel Galileo Exploring Arduino takes you on an adventure and provides you with exclusive access to materials not found anywhere else! This outstanding collection of essays, presented at the 2005 Wheaton Theology Conference, explores the current issue of women in ministry from biblical, theological and ecclesiological perspectives. Bringing to bear the ministerial and sociological insights on the issue, this impressive integrative work aims to break through the current impasse between complementarians and egalitarians. These essays point the way forward for women and men in ministry in our churches. Contributors include Henri Blocher, Timothy George, James Hamilton, I. Howard Marshall, Cheryl J. Sanders, Sarah Sumner and Mary Stewart Van Leeuwen "5 story paths, 43 choices, 18 endings"--Cover." A NEW YORK TIMES EDITORS' CHOICE NAMED A BEST BOOK OF THE YEAR BY TIME , NPR, INSTYLE, AND GOOD HOUSEKEEPING "A sensational new book [that] tries to figure out whether it's possible to live an ethical life in a capitalist society. . . . The results are enthralling."
—Associated Press A timely and arresting new look at affluence by the New York Times bestselling author, "one of the leading lights of the modern American essay."

—Financial Times “My adult life can be divided into two distinct parts,” Eula Biss writes, “the time before I owned a washing machine and the time after.” Having just purchased her first home, the poet and essayist now embarks on a provocative exploration of the value system she has bought into. Through a series of engaging exchanges—in libraries and laundromats, over barstools and backyard fences—she examines our assumptions about class and property and the ways we internalize the demands of capitalism. Described by the New York Times as a writer who “advances from all sides, like a chess player,” Biss offers an uncommonly immersive and deeply revealing new portrait of work and luxury, of accumulation and consumption, of the value of time and how we spend it. Ranging from IKEA to Beyoncé to Pokemon, Biss asks, of both herself and her class, “In what have we invested?”

Like it or not, JavaScript is everywhere these days—from browser to server to mobile—and now you, too, need to learn the language or dive deeper than you have. This concise book guides you into and through JavaScript, written by a veteran programmer who once found himself in the same position. Speaking JavaScript helps you approach the language with four standalone sections. First, a quick-start guide teaches you just enough of the language to help you be productive right away. More experienced JavaScript programmers will find a complete and easy-to-read reference that covers each language feature in depth. Complete contents include: JavaScript quick start: Familiar with object-oriented programming? This part helps you

learn JavaScript quickly and properly. JavaScript in depth: Learn details of ECMAScript 5, from syntax, variables, functions, and object-oriented programming to regular expressions and JSON with lots of examples. Pick a topic and jump in. Background: Understand JavaScript's history and its relationship with other programming languages. Tips, tools, and libraries: Survey existing style guides, best practices, advanced techniques, module systems, package managers, build tools, and learning resources. Maps are essential to an explorer. Whether it is a short jaunt to a vacation spot or an in-depth search for higher meaning, maps can help you find and stay on the right path. In *From Gospels to Glory: Exploring the New Testament*, author Kenneth G. Hanna provides a guide for discovering the enduring message and unique features of each book of the New Testament. The course of human history was set in a new direction by the arrival of Jesus Christ in Bethlehem. The Gospels of the New Testament record that event and Jesus' ministry, climaxing in the cross and His resurrection. This new study guides you through the pivotal events of the life of Christ, the birth and spread of Christianity, and the life-shaping truth that formed the legacy Jesus committed to the first disciples. For pastors and teachers, it offers helpful ideas and outlines for proclaiming the message of the New Testament to a contemporary audience. For students of the New Testament, it provides a wealth of resources for further study. Thematic charts present a map of each book, including key verses, themes, structures, and unique features. Each book of the New Testament was written for a

select audience and a specific purpose. From *Gospels to Glory: Exploring the New Testament* supplies essential background information that illuminates the message of each book to help you proceed on your journey of discovery. This volume illuminates Paul's use of the Old Testament and assesses competing contemporary approaches to Paul's interpretations of Scripture.

From the Arizona Congressman, a 21st-century Band of Brothers chronicling the eternal bonds forged between the Marines of Lima Company, the hardest-hit unit of the Iraq War. At first, they were "Lucky Lima." Infantryman Ruben Gallego and his brothers in Lima Company—3rd Battalion, 25th Marines, young men drawn from blue-collar towns, immigrant households, Navajo reservations—returned unscathed on patrol after patrol through the increasingly violent al Anbar region of Iraq, looking for weapons caches and insurgents trying to destabilize the nascent Iraqi government. After two months in Iraq, Lima didn't have a casualty, not a single Purple Heart, no injury worse than a blister. Lucky Lima. Then, in May 2005, Lima's fortunes flipped. Unknown to Ruben and his fellow grunts, al Anbar had recently become a haven for al Qaeda in Mesopotamia. The bin Laden-sponsored group had recruited radicals from all over the world for jihad against the Americans. On one fateful day, they were lured into a death house; the ambush cost the lives of two men, including a platoon sergeant. Two days later, Ruben's best friend, Jonathon Grant, died in an IED attack, along with several others. Events worsened from there. A disastrous operation in Haditha in August

claimed the lives of thirteen Marines when an IED destroyed their amphibious vehicle. It was the worst single-day loss for the Marines since the 1983 Beirut bombings. By the time 3/25 went home in November, it had lost more men than any other single unit in the war. Forty-six Marines and two Navy Corpsmen serving with the battalion in Iraq were killed in action during their roughly nine-month activation. They Called Us “Lucky” details Ruben Gallego’s journey and includes harrowing accounts of some of the war’s most costly battles. It details the struggles and the successes of Ruben—now a member of Congress—and the rest of Lima Company following Iraq, examining the complicated matter of PTSD. And it serves as a tribute to Ruben’s fallen comrades, who made the ultimate sacrifice for their country. James S. Jeffers provides an informative tour of the various facets of the Roman world--class and status, family and community, work and leisure, religion and organization, city and country, law and government, death and taxes, and the events of Roman history. What is distinctive about the ways specific disciplines are traditionally taught, and what kinds of learning do they promote? Do they inspire the habits of the discipline itself, or do they inadvertently contradict or ignore those disciplines? By analyzing assumptions about often unexamined teaching practices, their history, and relevance in contemporary learning contexts, this book offers teachers a fresh way to both think about their impact on students and explore more effective ways to engage students in authentic habits and practices. This companion volume to

Exploring Signature Pedagogies covers disciplines not addressed in the earlier volume and further expands the scope of inquiry by interrogating the teaching methods in interdisciplinary fields and a number of professions, critically returning to Lee S. Shulman's origins of the concept of signature pedagogies. This volume also differs from the first by including authors from across the United States, as well as Ireland and Australia. The first section examines the signature pedagogies in the humanities and fine arts fields of philosophy, foreign language instruction, communication, art and design, and arts entrepreneurship. The second section describes signature pedagogies in the social and natural sciences: political science, economics, and chemistry. Section three highlights the interdisciplinary fields of Ignatian pedagogy, women's studies, and disability studies; and the book concludes with four chapters on professional pedagogies – nursing, occupational therapy, social work, and teacher education – that illustrate how these pedagogies change as the social context changes, as their knowledge base expands, or as online delivery of instruction increases. Paul follows his introduction with a greeting to the Roman church and expresses his desire to preach in Rome someday. Paul gives a summary of the theme of his letter: "The Gospel...is the power of God for salvation to everyone who has faith, to the Jew first and also to the Greek." The Jewish Christians found they were not the minority within a Gentile church. Paul therefore wrote Romans to encourage the Gentiles to live in harmony with Jewish Christians. Unlike Galatia, it is possible that the

only Gentile converts in Rome were God-fearing Gentiles and quite happy with most Jewish practices. These Gentiles we're happy and comfortable with living under the Jewish culture and lifestyle. Converting to Christianity means that you are turning away from evil and more toward the good of this world. "The just shall live by faith" according to Galatians 3:11 and Romans 1:17. The emphasis Martin Luther placed on the Gospel truth in the sixteenth century resulted in the Protestant Reformation. This doctrine of justification by faith brought new life into the Church and became one of the central teachings of the evangelical churches. An understanding of this concept will result in a deeper appreciation of the grace of God, as it comes to us through our Lord and Savior Jesus Christ. Added note of today: Our young people is how we will live and grow up our future generations. Preachers, let's preach the word today. "Every life, all lives—Black, Brown, White, Yellow lives—matter. Faith is our guide." The timeless message of the New Testament applies to people of every culture and generation. Yet there is great value in understanding the world in which that message was first revealed - its social manners, politics, religious customs, and culture. Exploring the New Testament World, written by classics and Bible scholar Dr. Albert A. Bell, Jr., illuminates the living context of the New Testament, immersing its readers in the intriguing world of Jesus and the early church. An authority on ancient Greek and Roman language, culture, and history, Dr. Bell writes in a readable style that is accessible and enjoyable to any reader - an uncommon

accomplishment among New Testament scholars today. Surveying Jewish factions of the era, the social and political structure of the Roman Empire, and the philosophies and religions that surrounded the early church, Dr. Bell helps his readers learn to think like first-century Jews, Greeks, and Romans, illuminating puzzling New Testament passages for clear understanding. Comprehensive Scripture and Subject Indexes make this volume even more useful as a "manners and customs" Bible companion. This authoritative guide receives high praise from college professors and Sunday school teachers alike, proving its appeal to both popular and academic audiences. A "must-have" reference for every pastor and an indispensable resource to any Bible reader. Provides information on how to find plants and other materials in local bioregions that can be used in the kitchen, along with seasonal recipes and instructions for preparing a variety of preserved foods, including ferments, infusions, and spices. "This book brings together eminent global theorists and practitioners to share their views on the evolution of career counselling in recent decades. Multiple changes of a fundamental and complex nature, as well as related challenges in the world of work, have necessitated career counselling to undergo such an evolution. The authors examine the future nature and scope of new directions in the field of career counselling psychology and they critically reflect on, as well as promote the predominant theoretical and conceptual framework of the field of career counselling. The latest models and methods in and for the 21st century are explored and teased out, including Mark

Savickas' proposal to shift the focus in interventions from conceptualising the self as content to seeing the self as a process. This approach is in keeping with the notion of career as a story and consistent with leading theories such as Jean Guichard's self-construction framework and the life design paradigm. The authors deliver an avant garde text that is easy to read and use without diluting the conceptual and terminological complexities of the field. The book is an invaluable resource for new, emerging and experienced researchers, academics, scholars, researchers, psychologists, social workers, teachers and clients:

- It merges what is known about the field with emerging approaches.
- It gives an overview of theoretical paradigms that can be applied to a changing world of work.
- It makes a critical analysis of germane questions such as "What does the future hold for the field of career counselling and how can challenges be turned into opportunities?" and "How can different paradigms, approaches and strategies be harnessed to promote clients' career-life wellbeing and resilience?".
- It facilitates an understanding of the skills necessary to deal with career-related transitions, challenges and barriers to help people acquire transferable career-life skills and career(-choice) readiness.
- It examines the importance of career adaptability and how people can develop this vital 21st century (survival) competency.
- It challenges career counsellors to grasp and acquire skills to promote and advocate social justice agendas.
- It promotes and demonstrates the exciting and promising notion of dialogue writing to enhance the

dialogical work of the career counsellor and client. Individually and collectively, the authors team up to blend retrospect and prospect, and they make a concerted effort to convert 21st century challenges and frontiers in career counselling into opportunities, hurt into hope, hopelessness into inspiration." In this systematic, book-by-book exploration of the theology of each New Testament writing, Frank J. Matera explores theological diversity and unity in the writings of the New Testament. After an introduction to the history and method of New Testament theology, he explains and describes the theologies of the Synoptic, Pauline, and Johannine traditions, as well as the rich theology of other New Testament voices: Hebrews, the Catholic Epistles, and the book of Revelation. Integrating both Protestant and Catholic approaches, this work provides students, pastors, and scholars a comprehensive view of the New Testament that is rich in exegetical and theological insight.

Glycosaminoglycans are linear, anionic polysaccharides (GAGs) consisting of repeating disaccharides. GAGs are ubiquitously localized throughout the extracellular matrix (ECM) and to the cell membranes of cells in all tissues. They are either conjugated to protein cores in the form of proteoglycans, e.g., chondroitin/dermatan sulfate (CS/DS), heparin/heparan sulfate (Hep/HS) and keratan sulfate (KS), as well as non-sulfated hyaluronan (HA). By modulating biological signaling GAGs participate in the regulation of homeostasis and also participate in disease progression. The book, entitled "Exploring the multifaceted roles of

glycosaminoglycans (GAGs)-new advances and further challenges", features original research and review articles. These articles cover several GAG-related timely topics in structural biology and imaging; morphogenesis, cancer, and other disease therapy and drug developments; tissue engineering; and metabolic engineering. This book also includes an article illustrating how metabolic engineering can be used to create the novel chondroitin-like polysaccharide. A prerequisite for communicating in any discipline and across disciplines is familiarity with the appropriate terminology. Several nomenclature rules exist in the field of biochemistry. The historical description of GAGs follows IUPAC and IUB nomenclature. New structural depictions such as the structural nomenclature for glycan and their translation into machine-readable formats have opened the route for cross-references with popular bioinformatics resources and further connections with other exciting "omics" fields. Why do we still tolerate stereotypes and discrimination based on age? This bold account of the history and present-day realities of ageism by a nationally recognized gerontologist and speaker uncovers ageism's roots, impact, and how each of us can create a new reality of elderhood. Ageism Unmasked shifts the lens, enabling us to see that we tolerate, and sometimes actively promote, attitudes and behaviors toward differently aged people that we would reject and condemn if applied to any other group. It peels back the layers to expose how cultural norms and unconscious prejudices have seeped into our lives, silently shaping our treatment of others based on their age and our

own misconceptions about aging—and about ourselves. Offering an all-inclusive approach, Dr. Tracey Gendron reveals the biases behind our false understanding of aging, sharing powerful opportunities for personal growth along with strategies to help create an anti-ageist society. *Ageism Unmasked* will help readers let go of our desperate need to stay young... exposing how we personally, systematically, structurally, and institutionally stigmatize being old. *Ageism Unmasked* will help readers appreciate both the challenges and opportunities of how we all age... showing how ageism is prejudice towards both younger and older people. *Ageism Unmasked* will help readers reset our expectations for getting old... providing the tools to anticipate and experience elderhood as a time of renewed meaning and purpose, empowering each of us to create our own definition of successful aging. *Ageism Unmasked* continues Dr. Gendron's transformative work inspiring people of all ages to embrace aging as our universal and lifelong process of developing over time — biologically, psychologically, socially, and spiritually. Maps are essential to an explorer. Whether it is a short jaunt to a vacation spot or an in-depth search for higher meaning, maps can help you find and stay on the right path. Exploring the Latest Trends in Management Literature presents cutting edge literature reviews on the emerging concepts, theories, and research trends across management disciplines. Get the tools, resources and insights you need to explore artificial intelligence in the classroom and explore what students need to know about living in a world with AI. For many, artificial intelligence, or AI, may seem like science fiction, or inherently overwhelming. The reality is that AI is already being applied in industry and, for many of us, in our daily lives as well. A better understanding of AI can help you make informed decisions in the classroom that will impact the future of your students. Drawing from a broad variety of expert voices from countries including Australia, Japan, and South Africa,

as well as educators from around the world and underrepresented student voices, this book explores some of the ways AI can improve education. These include educating learners about AI, teaching them about living in a world where they will be surrounded by AI and helping educators understand how they can use AI to augment human ability. Each chapter offers activities and questions to help you deepen your understanding, try out new concepts and reflect on the information presented. Links to media artifacts from trusted sources will help make your learning experience more dynamic while also providing additional resources to use in your classroom. This book:

- Offers a unique approach to the topic, with chapter opening scenes, case studies, and featured student voices.
- Discusses a variety of ways to teach students about AI, through design thinking, project-based learning and STEM connections.
- Includes lesson ideas, activities and tools for exploring AI with your students.
- Includes references to films and other media you can use in class to start discussions on AI or inspire design thinking and STEM projects.

In *Teaching AI*, you'll learn what AI is, how it works and how to use it to better prepare students in a world with increased human-computer interaction. Have you ever wondered what happens in the earth underneath us? James has, and he wants to learn more about soil. In *Exploring Soils: A Hidden World Underground*, James discovers that soil is not just dirt for digging in. He explores how plants and animals live in soil, how soils are formed, how they differ, and the ways that soil is essential in our

lives. Written by Samantha Grover, a soil scientist and parent, and with engaging illustrations by artist Camille Heisler, *Exploring Soils* will take you to an underground world filled with activity and discoveries. Perfect for ages 6 – 9.
