Doing Q Methodological Research Aug 08 2021 This book is a simple yet thorough introduction to Q methodology, research technique designed to capture the subjective or person viewpoints of its participants. Watts and Steffen outline the key theoretical concepts developed by William Stephenson, the founder of Q methodology, including subjectivity, concurrence theory and abduction. They then to the practicalities of delivering high quality Q methodological research. Using worked examples throughout, the reader is guided through: • important design issues • the conduct of fieldwork • all the analytic processes of Q methodology, including factor extraction, factor rotation and factor interpretation. Drawing on helpful conceptual introductions to potentially difficult statistical concepts and a step-by-step guide to running Q methodological analyses using dedicated software, this book enables interested readers to design, manage, analyse, interpret and publish their own Q methodological research. Persuasion Mar 15 2022 Persuasion: Theory and Research

Third Edition is a comprehensive overview of social-scientific theory and research on persuasion. Written in a clear and accessible style that assumes no special technical background in research methods, the Third Edition has been thoroughly revised to reflect developments in persuasion studies. New discussions of subjects such as reactance and the use of narratives as vehicles for persuasion, revised treatments of the theories of reasoned action and planned behavior, and two new chapters on social judgment theory and stage models provide your students with the most current work on persuasion in a clear, straightforward manner. In this edition, author Daniel J. O'Keefe has given special attention to the importance of adapting (tailoring) messages to audiences to maximize persuasiveness. Each chapter includes a set of review questions to guide students through the chapter's material and quickly master the concepts being introduced.

Some Data on the Static Longitudinal Stability and Control of Airplanes Dec 12 2021 In the solution of a number of problems on the stability and controllability of airplanes, there arises the necessity for knowing the characteristics of the tail surfaces of the types in common use today. Of these characteristics, the most important are the effectiveness of the hinge moments of the tail surfaces. As has been shown in the present paper, there exists the possibility of determining these characteristics by the formulas obtained with a degree of accuracy sufficient for the purposes of preliminary

computation. These formulas take into account a number of fundamental tail characteristics such as tail cut-outs on the control surface and the form of the control surface leading edge.

A Practical Guide to Rational Drug Design Aug 20 2022

This book is not going to be an exhaustive survey covering all aspects of rational drug design. Instead, it is going to provide critical know-how through real-world examples. Relevant case studies will be presented and analyzed to illustrate the following: how to optimize a lead compound whether one has high or low levels of structural information; how to derive hits from competitors' active compounds from natural ligands of the targets; how to springboard competitors' SAR knowledge in lead optimization; how to design a ligand to interfere with protein-protein interactions by correctly examining the PPI interface; how to circumvent IP blockage using data mining; how to construct and fully utilize a knowledge-based molecular descriptor system; how to build a reliable QSAR model by focusing on data quality and proper selection of molecular descriptors and statistical approaches. A Practical Guide to Rational Drug Design focuses on computational drug design, with only basic coverage of biology and chemistry issues, such as assay design, target validation and synthetic routes. Discusses various tactics applicable to daily drug design Readers can download the materials used in the book, including

structures, scripts, raw data, protocols, and codes, making this book a suitable resource for short courses or workshops. Offers a unique viewpoint on drug discovery research due to the author's cross-discipline education background. Explores the author's rich experiences in both pharmaceutical and academic settings.

Chemical Master Equation for Large Biological Networks  
Aug 28 2020 This book highlights the theory and practical applications of the chemical master equation (CME) approach for very large biochemical networks, which provides a powerful general framework for model building a variety of biological networks. The aim of the book is to not only highlight advanced numerical solution methods for CME, but also reveal their potential by means of practical examples. The case studies presented are mainly from biology; however, the applications from novel methods are discussed comprehensively, underlining the interdisciplinary approach in simulation and the potential of the chemical master equation approach for modelling biological networks. This book is a valuable guide for researchers, graduate students and professionals alike.

Integer Programming and Network Models April 16 2022

The purpose of this book is to provide readers with an introduction to the very active field of integer programming and network models. The idea is to cover the main parts of the field without being too detailed or too technical. As a matter of fact, we found it somewhat surprising that most--especially newer---books are strongly algorithmically oriented. In contrast, the main emphasis of this book is on models rather than methods. This focus expresses our view that methods are tools to solve actual problems and not ends in themselves. As such, graduate (and with some omissions, undergraduate) students may find this book helpful in their studies as will practitioners who would like to get acquainted with a field or use this text as a refresher. This premise resulted in a coverage that omits material that is standard fare in other books, whereas it covers topics that are only infrequently found elsewhere. There are some, yet relatively few, prerequisites for the reader. Most material that is required for the understanding of more than one chapter is presented in one of the four chapters of the introductory part, which reviews the main results in linear programming, the analysis of algorithms, graphs and networks, and dynamic programming, respectively. Readers who are familiar with the issues involved can safely skip that part. The three main parts of the book rely on intuitive reasoning and examples, whenever practical, instead of theorems and

proofs.

Physics Letters Jan 25 2020

Cycles, Growth and Structural Change May 03 2021 This volume gathers together key new contributions on the subject of the relationship, both empirical and theoretical, between economic oscillations, growth and structural change. Employing a sophisticated level of mathematical modelling, the collection contains articles from, amongst others, William Baumol, Katsuhito Iwai and William Brock.

The Power Electronics Handbook Oct 30 2020 Less expensive, lighter, and smaller than its electromechanical counterparts, power electronics lie at the very heart of controlling and converting electric energy, which in turn is at the heart of making that energy useful. From household appliances to space-faring vehicles, the applications of power electronics are virtually limitless. Until now, however, there has been no book devoted to power electronics. Written by engineers for engineers, The Power Electronics Handbook covers the full range of relevant topics, from basic principles to cutting-edge applications. Compiled from contributions by an international panel of experts and full of illustrations, this is not a theoretical tome, but a practical and enlightening presentation of the usefulness and variety of technologies that encompass the field. For modern and emerging applications, power electronic devices and systems must be small, efficient, lightweight, controllable, reliable, and

economical. The Power Electronics Handbook is your key understanding those devices, incorporating them into controllable circuits, and implementing those systems in applications from virtually every area of electrical engineering.

Quarterly Progress Report Apr 04 2021

Functional Structures in Networks Sep 09 2021 Designed to make life easier for most network designers, whether they are a manager with technical background, work with standardization, the architecture of implementers' solutions to standards, product design (constructing the software/hardware parts of operator networks), system testing, and operators responsible for the configuration and maintenance of a network. Develops modeling as a basic principle for producing specifications turns design from being document-driven to model-driven. In the context of this book, however, the only model type that is discussed is the information model that describes the purpose, structure, and behavior of a network. Presents an added-value modeling language called AMLn (Abstract Modeling Language, network view) which is the first and, so far, the only attempt to create a modeling language for network systems.

Numerical Models in Groundwater Pollution Feb 02 2021

Mathematical models are powerful tools used in the prediction of pollutant movement. This book discusses the Finite Element Method (FEM) and Boundary Element Method (BEM), and takes a look at the advantages of the

methods in groundwater hydrology. The combination of BEM and the random-walk particle tracking method is also presented. The book includes computer programs, source code, and examples developed on the basis of the theoretical backgrounds of these methods. These Visual C++ programs are compatible with the Windows platform.

Technical Memorandum - National Advisory Committee for Aeronautics Nov 11 2021 Chiefly translations from foreign aeronautical journals.

New Horizons in Occultation Research Nov 30 2020 This book presents edited and peer-reviewed papers from the International Workshop on Occultations for Probing Atmosphere and Climate (OPAC-3), held in Austria. It provides a key reference on the current status in the field and looks toward new horizons.

Biomaterials Jul 19 2022  
Biomaterials is a natural process by which living organisms form minerals in association with organic biostructures to form hybrid biological materials such as bone, enamel, dentine and nacre among others. Scientists have researched the fundamentals of these processes and the unique structures and properties of the resulting mineral tissues. Inspired by them, new biomaterials for tissue engineering and regenerative medicine have been developed in recent years. Biomaterials: fundamentals and applications looks at the characteristics of these essential processes and natural materials and describes

strategies and technologies to biomimetically design and produce biomaterials with improved biological performance. Provides a thorough overview of the biomineralization process. Presents the most recent information on the natural process by which crystals in tissues form into inorganic structures such as bone, teeth, and other natural mineral tissues. Investigates methods for improving mineralization. Explores new techniques that will help improve the biomimetic process.

Facts on Film Jul 27 2020

Schreuer's Commentary on the ICSID Convention, 7th Edition, 2021. This unique compendium offers an article-by-article commentary on the Convention on the Settlement of Investment Disputes between States and Nationals of Other States. Providing a comprehensive explanation of the functioning of this important mechanism for the settlement of investor-State disputes, it incorporates the preparatory work, the Convention's text, various rules and regulations adopted under the Convention, the practice of arbitral tribunals under the Convention, and academic writings on the subject. The first and second editions of this Commentary have been relied upon by numerous arbitral tribunals. The third edition follows the same system and approach, but with extensive updates and revisions that reflect the vast increase in arbitral practice since the publication of the second edition. A number of novel issues that have emerged through the practice are now addressed, making this practice-oriented

guide an indispensable tool for anyone dealing with the ICSID Convention. Likewise, the number of contributors and editors of the third edition has increased.

NUMISHEET 2022 Dec 20 2019 The NUMISHEET conference series is the most significant international conference on the area of the numerical simulation of sheet metal forming processes. It gathers the most prominent experts in numerical methods in sheet forming processes is an outstanding forum for the exchange of ideas and for the discussion of technologies related to sheet metal forming processes. Topics covered in this volume include but are limited to the following: Materials Modeling and Experimental Testing Methods Friction and Contact Formability, Necking, and Fracture Instabilities and Surface Defects Fracture and Damage Numerical Methods Springback Incremental Sheet Forming Roll Forming Innovative Forming Methods Product and Process Design and Optimization

Focus On: 100 Most Popular Station Wagons 2023  
Business Model Innovation Sep 21 2022 Rooted in strategic management research, Business Model Innovation explores the concepts, tools, and techniques that enable organizations to gain and/or maintain a competitive advantage in the face of technological innovation, globalization, and an increasingly knowledge-intensive economy. The book investigates how organizations can use innovations in business models to take advantage of entrepreneurial opportunities from: • Crowdsourcing and open innovation • Long Tails • Social media • Disruptive technologies • Less-is-more innovations • Network effects • Scarcity of complementary capabilities The book also looks at the ways firms can use innovations in business models to exploit and defend against threats. With twelve supplementary case studies to help readers apply the concepts and techniques, this book is a must-have for anyone looking to understand the fundamentals of business model innovation.

Matter, Building Block of the Universe Nov 18 2019

Between Necessity and Probability: Searching for the Definition and Origin of Life Sep 28 2020 Systematically explores the early origins and basic definition of life. Investigates the major theories of the origins of life in light of modern research with the aim of distinguishing between the necessary and the optional and between determinist

and random influences in the emergence of what we call 'life.' Treats and views life as a cosmic phenomenon whose emergence and driving force should be viewed independent from its Earth-bound natural history. Synthesizes all the fundamental life-related developments in a comprehensive scenario, and makes the argument that understanding life in its broadest context requires a material-independent perspective that identifies its essential fingerprints

Australian Forest Industries Journal May 25 2020

From Shadow to Presence Oct 10 2021 This volume departs from a more static concept of identity politics to engage varied and entangled processes of ethnic/racial, national and gender identifications in a range of contemporary US ethnic texts (from the mid-1960s to the mid-1990s). Recognizing the growing salience of variously named ethnic multicultural, and minority literatures as they are produced and circulated in the USA and worldwide nowadays, this work charts four broadly defined models of approaching such texts: cultural nationalism, ethnic feminism, borderlands and contact zones, and finally, the diasporic model. Drawing extensively on psychoanalytic theory, feminist/gender studies, critical race theory, postcolonial theory, and its revision of ethnography, the book offers a fresh, engaged, theoretically, and analytically well-rehearsed overview of the distinctive and determining features of a rapidly expanding domain of contemporary US literary production, namely, ethnic literatures. Of potential interest

to scholars of American/US literature, but also minority postcolonial literatures, and to students of American literature, the book attempts an interethnic comparative approach to well- and lesser-known texts. Among the authors represented are Shawn Wong, Oscar Zeta Acosta, Toni Morrison, Maxine Hong Kingston, Sherman Alexie, Denise Chávez, Rolando Hinojosa, Roberto Fernández and Edwidge Danticat.
