[Another] 1894 Astronomical and Meteorological Observations Made at the Radcliffe Observatory, Oxford

Studies on the populations of luminous stars in nearby resolved galaxies have revealed a complex distribution in the luminosity-temperature plane (the HR diagram). The fundamentals of massive star evolution are mostly understood, but the roles of mass loss, episodic mass loss, rotation, and binarity are still in question. Moreover, the final stages of these stars of different masses and their possible relation to each other are not understood. The purpose of this volume is to provide a current review of the different

populations of evolved massive stars. The emphasis is on massive stars in the Local Group, the Magellanic Clouds, and the nearby spirals M31 and M33. List of quarto publications, exclusive of the Annals, made by the officers of the observatory from 1877 to 1896, with references to the work of the Blue Hill observatory from 1885 to 1895: v. 30, p. 3-8. Vols. 1-4 consist of miscellaneous researches. From the illustrator of the #1 smash hit *The Day the Crayons Quit* comes a story about wishing, persevering, and reaching for the stars. Once there was a boy, and that boy loved stars very much. So much so that he decided to catch one of his very own. But how? Waiting for them to grow tired from being up in the sky all night doesn't work. Climbing to the top of the tallest tree? No, not tall enough. The boy has a rocket ship . . . but it is made of paper and doesn't fly well at all. Finally, just when the boy is ready to give up, he learns that sometimes things aren't where, or what, we expect them to be. Oliver Jeffers offers a simple, childlike tale of reaching for the stars, and emerging with a friend. Vols. - include the Shorthorn Society's Grading register for beef Shorthorn cattle; v. - include the society's Herd book of poll shorthorns. Portfolio of 8 charts accompanies v. 83.
